MATTHEWS MOYA ARCHITECTS is a New York City based design practice, whose projects have received numerous design awards and been featured in national publications. Timeless design characterizes the firm's portfolio which includes civic, institutional, commercial, residential and urban design projects, with a concentration on arts and education-related projects. Led by principals Peter Matthews AIA and Frank X. Moya AIA, colleagues who met at Princeton University School of Architecture in the late 1970's, at a time when the fundamentals of architecture were being actively debated.

The firm is committed to an integrated approach to design services that ranges from contextual planning and urban design through all aspects of architecture, interior finishes and furnishings. The process starts with a broad analysis of site and program requirements that define project scope, often with the exploration of suitable alternatives that consider the demands of function, cost and aesthetics. New priorities set by sustainability planning and green design have established exciting new alternatives in both planning and building design, with potential advantages to the bottom line.

We consistently deliver designs that surprise and delight. Many of our clients are repeat clients, whom we have worked closely with on successive projects, having demonstrated our commitment to addressing their concerns.

We have found that when practical solutions are at the core, design is more meaningful and engaging. Factoring together many competing interests requires strong ideas that transform real needs into inspired and well-crafted design.

PETER MATTHEWS AIA

Peter has dedicated his life to the core aesthetic value of architecture. Since an early age, he has deliberated art and all things visual. Grounded in practicalities of program and tectonics, Peter focuses on revealing core truths and visual ideas that give form and meaning to design aesthetics. This vision is immediately apparent in the iconic Software Engineering Institute, at Carnegie Mellon University, that graced the cover of ARCHITECTURAL RECORD, one of his earlier works. An award winning architect, Peter led the design effort in many distinguished building projects. He is also an adept facilitator working with focus groups, committees and decision makers to define and realize challenging building programs. Peter's depth of experience includes stints at notable architectural offices in New York, Boston, San Francisco and Pittsburgh; as well as large scale clients such as the LeFrak Organization. His aesthetic focus, clean design lines and well-grounded artistic talent provide a statement of accomplished, timeless elegance and practicality that makes him particularly sensitive to the requirements of educational and arts related projects.

FRANK X. MOYA AIA

Frank has several decades of tempered experience programming and designing large-scale urban design, commercial, healthcare and educational facilities. After graduating, he quickly demonstrated his ability to realize sizable projects. At Hillier, the third largest US architecture firm, he established a reputation for versatility, independence and effectiveness in delivering numerous building types. During his practice and later as Principal in Charge of Design at HACBM, Frank developed expertise on community-based urban design and housing projects, where he earned respect for his vision and practical implementation, qualities which have made him a much sought after expert on regulatory design policy and strategic planning. He created education and housing prototypes that set control standards where design serves as policy for ongoing procurements. He prepared and executed a \$14-million master plan over a period of 15 years for STUART COUNTRY DAY SCHOOL in Princeton. Completed in 2002, the plan included four new buildings and numerous renovations to the Sacred Heart campus. Frank's sound judgment and agreeable manner make him most capable in guiding firm operations and efficient project management.

NCARB Certificate - Registered Architects in New York, New Jersey, Massachusetts, Pennsylvania and Puerto Rico.
